

ENGINEERING CHANGE NOTICE

ECN Number:	2025-052	Priority:	STANDARD
Date Issued:	April 8, 2025	Effectivity:	NEXT ORDER
Originated By:	T. Nakamura, Design	Approved By:	J. Harrison, QE

AFFECTED DOCUMENTS

Document	Current Rev	New Rev	Description
DWG 8891 — Actuator Arm	A	B	Add surface treatment note
PS-2025-004 — Surface Finish Spec	A	B	Add Class B+ for chrome plate

DESCRIPTION OF CHANGE

Added post-chrome-plate surface finish requirement to actuator arm bore. New note reads: 'AFTER CHROME PLATE: FINISH GRIND BORE TO 16 Ra MAX.' Surface Finish Spec PS-2025-004 updated to include Class B+ (16 Ra after plating) in the classification table.

REASON FOR CHANGE

Chrome plating process produces as-plated finish of approximately 32-63 Ra. For bearing bore application, 16 Ra is required for proper lubricant film. Adding explicit post-plate finish requirement prevents interpretation ambiguity.
